**This booklet is inspired by All-Ireland Pollinator Plan. I want to create an easy to access and understandable recommendation gide for people who are planting gardens or planters.**

**Over the past 100 years the amout of forests of Ireland is drastically decreased. It is important to try to restore the ecosystem that the island had in the past.**

**Plants on this list are native to Ireland. There are names and hyperlinks in digital version for the online store`s you can buy them from. Everything is non-sponsored and just researched by myself. I am not the stores owner and can't give you any guarantees.**

**Flowers on this list is good for polinators, trees - for birds and mammals. Any plants in your garden is benefitial for wildlife. But native plants are always better.**
